

Overview of COVID-19 Surveillance

This report is updated daily at approximately 1:00 p.m. Information on COVID-19 cases changes rapidly, and this report may not reflect updates made after 1:00 p.m. by local health departments or health care systems.

Report Date: April 12, 2020

2303
Total COVID-19 Cases

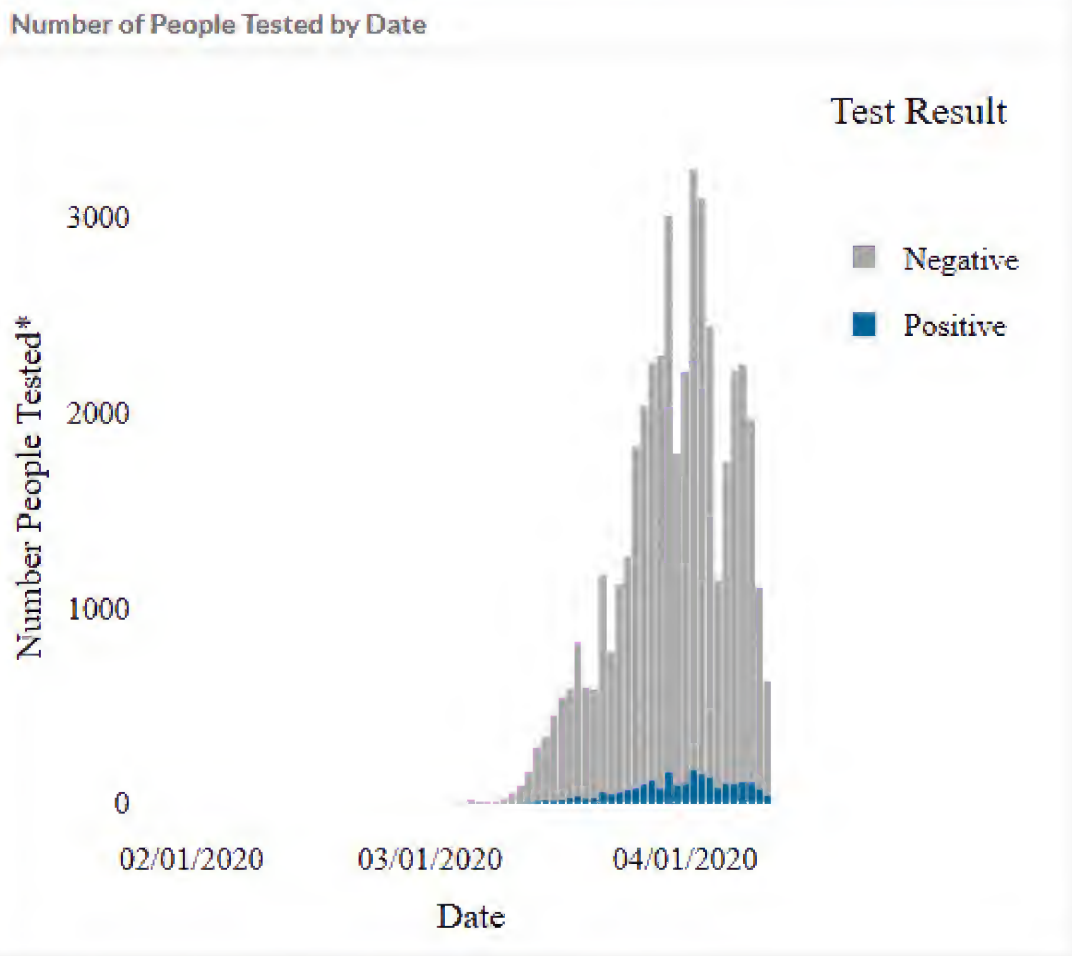

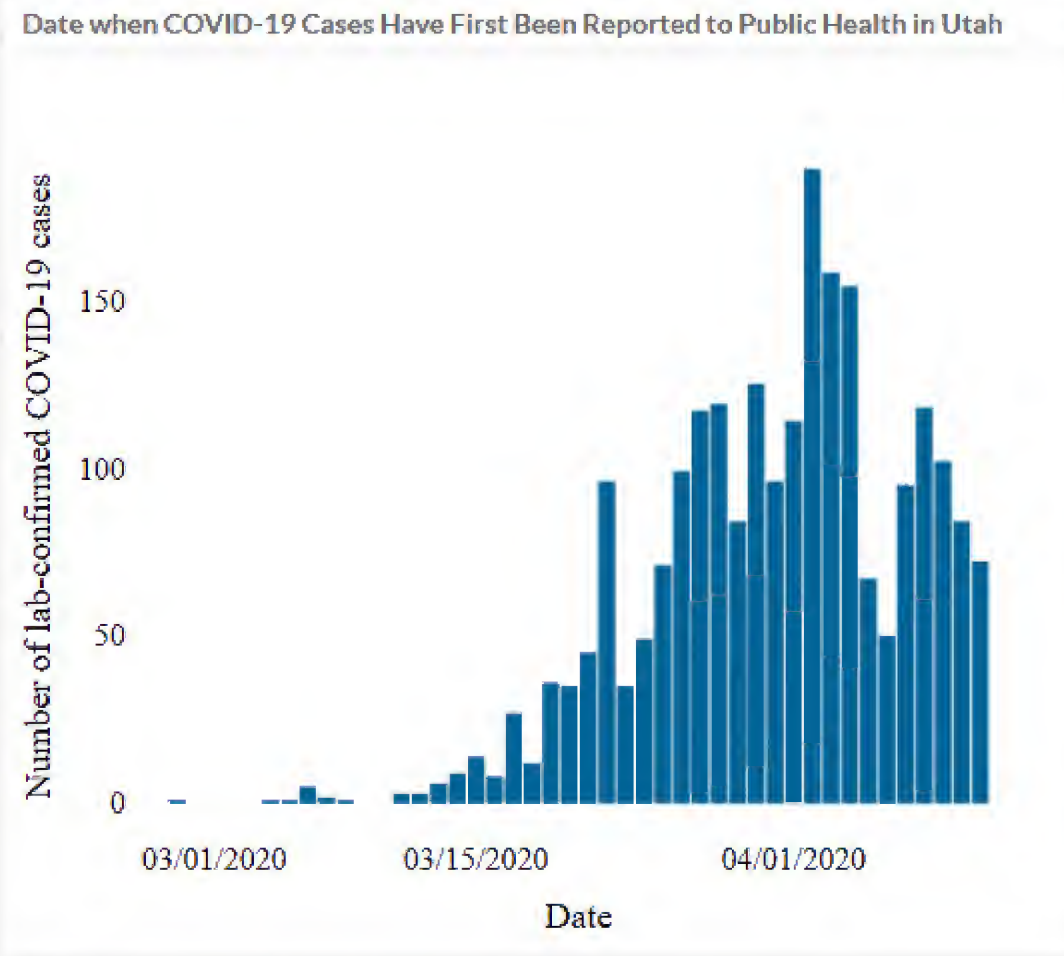

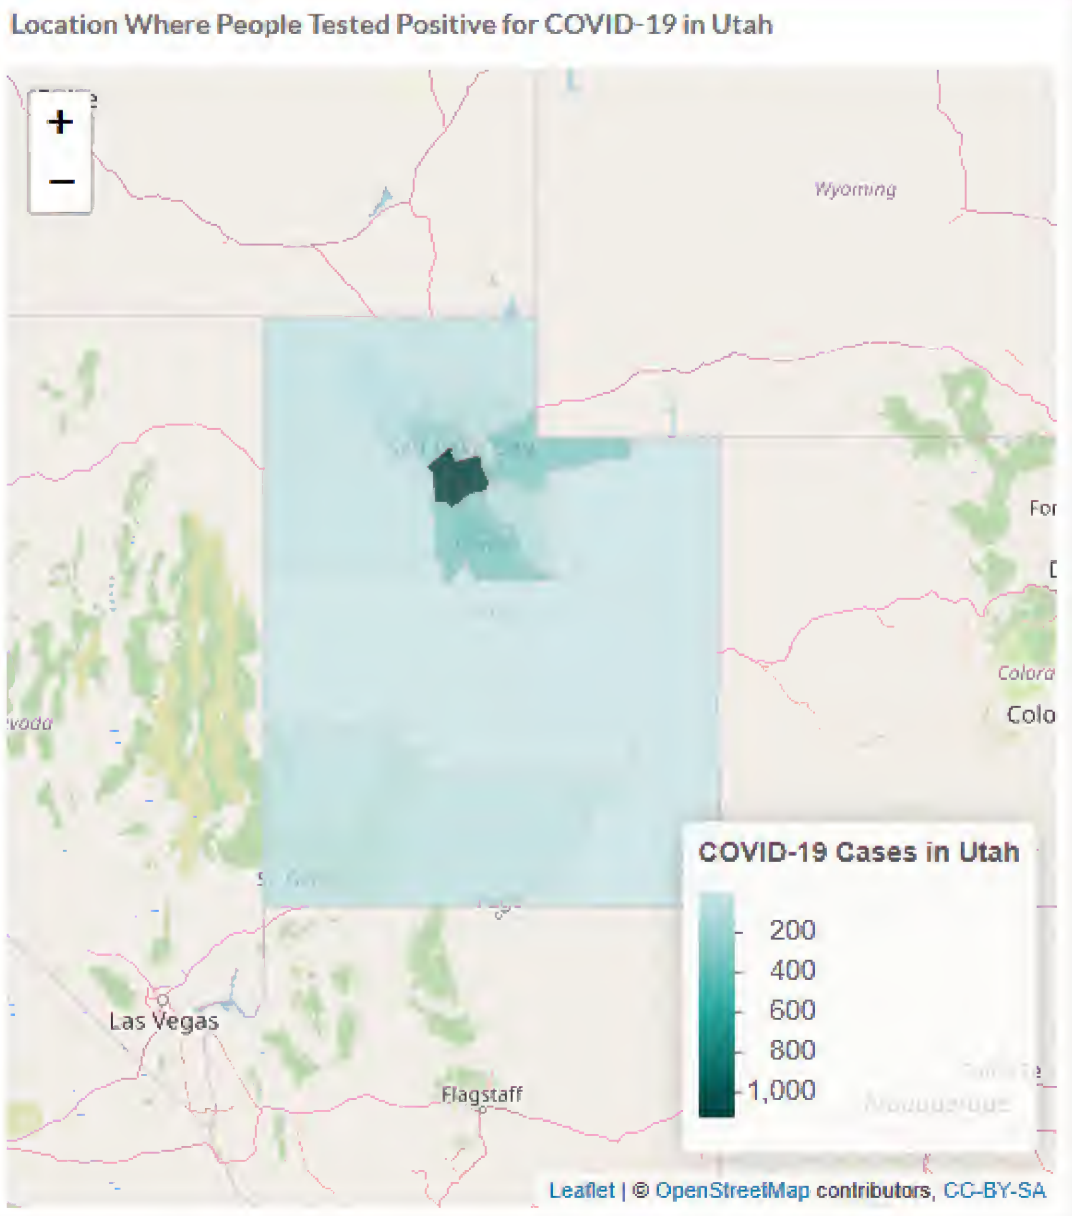

44234*
Total Reported People Tested

195
Total COVID-19 Hospitalizations

18
Total COVID-19 Deaths

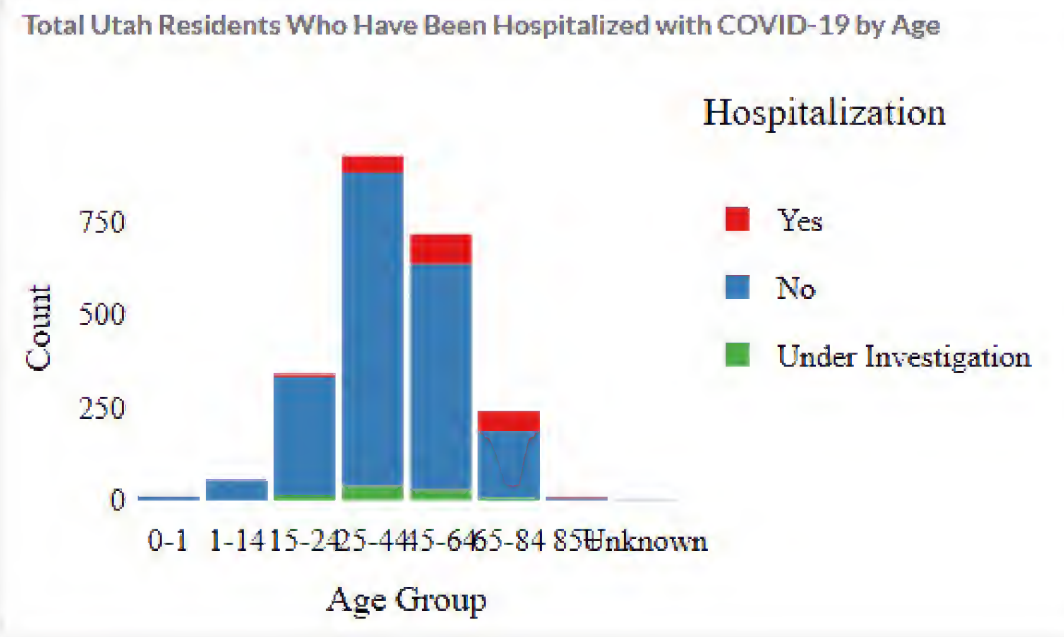

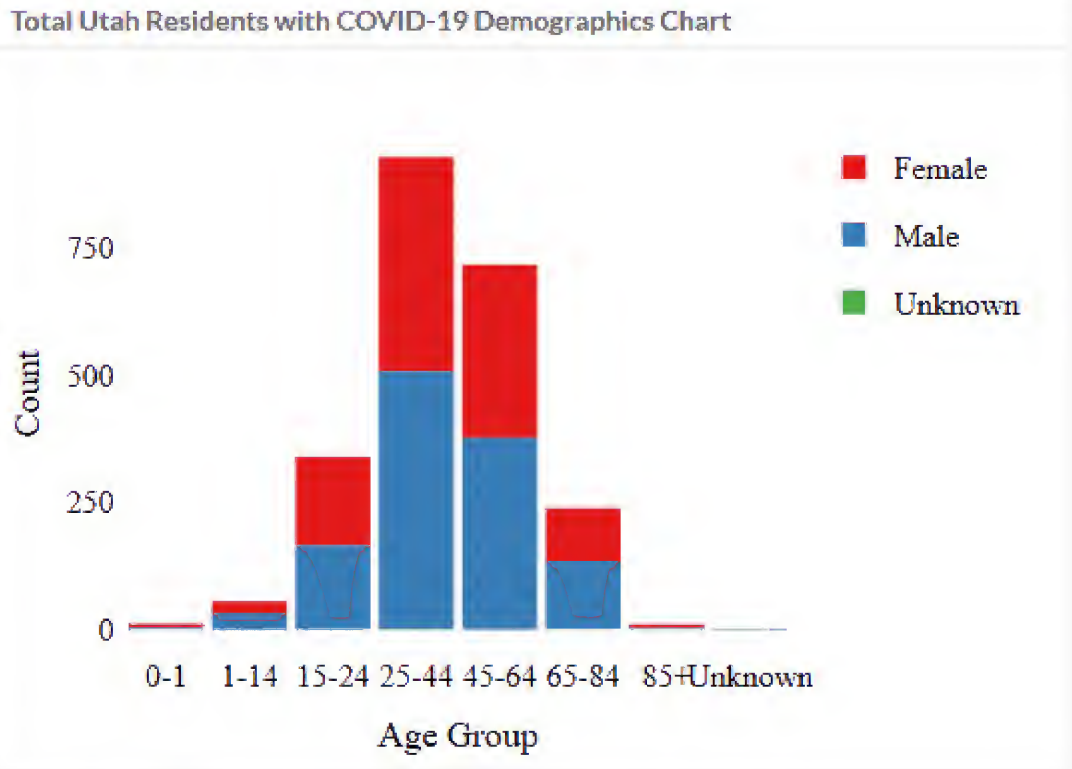

Total Number of Lab-Confirmed COVID-19 Cases in Utah

Jurisdiction	Cases	Hospitalizations
Bear River	46	8
Central Utah	6	1
Davis County	199	20
Salt Lake County	1126	95
San Juan	8	2
Southeast Utah	5	0
Southwest Utah	56	8
Summit County	304	25
Tooele County	33	4
TriCounty	8	0
Utah County	313	18
Wasatch County	103	5
Weber-Morgan	96	9
State Total	2303	195

Total Utah Residents with COVID-19 Demographics Table

Age Group	Case Count	Percent of Cases	Rate / 100,000 Population
Less than 1 year	12	1%	23.9
1-14 years	56	2%	7.7
15-24 years	340	15%	66.7
25-44 years	927	40%	103.1
45-64 years	716	31%	115.1
65-84 years	239	10%	76.4
85+ years	11	0%	29.1

Total Utah Residents Who Have Been Hospitalized with COVID-19

Hospitalization	Case Count	Percent of Investigated Cases
Yes	195	8.8%
No	2019	91.2%
Under Investigation	89	---

Data Notes:

Laboratory: As of March 19th, 2020 all major private and public laboratories in Utah are reporting positive and negative COVID-19 (SARS-CoV-2) results to UDOH, positive cases are reported immediately. Negative results may have up to a 72-hour lag before being reported and results prior to March 19th may be under-reported. Laboratory results are presented by the date a sample was tested. Laboratory positives may not match confirmed cases due to ongoing investigations and confirmatory testing.

Case data: As of April 2nd, 2020, UDOH is no longer including visitor cases in the case count to align with CDC reporting criteria. These cases will now be reported in their home states. Case data are displayed by the date the case is reported to public health – through contact tracing, some cases may be reported to public health prior to testing positive. Case count date may not match the tested date because of a delay between when a case is reported to public health and when public health receives the final laboratory report. Case counts in this report only represent laboratory confirmed cases. The actual number of cases in Utah is higher than what is reported due to mild cases not feeling ill enough to seek care, clinician judgement for testing, and expanding laboratory capacity.

Demographic data: There will be small count differences in data presented by age groups, self-reported sex, and hospitalization status. This is because some cases are not initially reported with all of these data elements and unknowns are excluded from this report. Case data will be updated as LHDs and UDOH complete investigations.

Hospitalization Data: Hospitalizations in this table represent the total number of cases that have been admitted to hospitals. This count does not represent the number of COVID-19 cases currently in the hospital. Hospitalization data is collected from patient interviews and medical chart abstractions by Local Health Departments (LHDs). While UDOH and LHDs capture most hospitalizations through provider reporting, some patients may be hospitalized after the case was investigated by an LHD and therefore not included in this count.
